

Tasks

- Download agentA.xml, agentB.xml, agentC.xml and lineup.xml
- Each file hold information about bands performing at your festival, but each agent uses a different XML format.
- I want you to create 3 XSL files, which will allow you to convert all of this information into a single format (split among three files.)
- Once you have done this, create the HTML files which don't have any data on them. (We'll create the data-centric schedule and band description pages next week.)
- Upload all your work to GitHub.
